Dermaheal
Local SEO Audit

Service-page visibility, Dwarka relevance and the “near me” discovery concern

Website: https://dermaheal.co.in/
Audit date: 30 October 2026
Primary location: C-712, Ramphal Chowk, Block D, Sector 7, Dwarka, Palam, New Delhi, Delhi 110075

> **Important:** Code changes are prepared in the workspace but are not deployed by this audit. No ranking or first-page outcome is promised. Google Search Console and Business Profile access were not available; ranking/indexing assertions are therefore not made.

Executive summary

The site has a dedicated treatment route for each of the **33 services** returned by the configured treatment CMS and listed in the live sitemap. The treatment pages are linked from the treatment directory, include procedure/suitability/benefit/FAQ sections, and have page-level breadcrumb, FAQ and MedicalProcedure schema in the shared template.

- **Verified code issue fixed:** Sanity treatment SEO fields (individual titles/descriptions/canonicals/noindex/OG image) were queried but not used by the page metadata function. The shared template now applies them, adds Dwarka/Delhi and Dermaheal to titles where needed, and preserves each service's own wording.
- **Local signal added:** Each treatment page now shows the verified address, linked phone numbers, map directions and a contact-page link; the clinic address is consistent in the clinic data and schema.
- **Heading and access improvements:** Service/location is now the page H1; page sections use treatment-specific headings; the hero background image receives an accessible label when a real CMS image is supplied.
- **Accuracy fix:** Unverified fixed Google-rating/review/referral statistics were removed from doctor/results-page badges. Re-add only after verifying the source and current values.
- **Count correction:** The treatment directory no longer claims "27 treatments" when the current sitemap contains 33 treatment URLs.
- **Botox coverage gap:** Botox is referenced in the anti-ageing content and exists in local fallback data, but has no matching treatment URL among the 33 live CMS/sitemap routes. Confirm it is currently offered; if so, publish the existing /treatments/botox page only with clinician-approved content and CMS configuration.

> **Expected benefit, not a ranking guarantee:** clearer service + location relevance, usable local contact actions, more consistent clinic identity and accurate page metadata can support organic relevance and patient conversion. "Near me" visibility also depends on Google's local ranking systems, location/proximity, Business Profile quality and competition.

Scope and evidence

Evidence checked	Finding	Limit
Live website, sitemap and robots.txt	Dedicated treatment routes are retrievable; the sitemap lists 33 treatment URLs. robots.txt allows public crawling and blocks /api/ and /admin/.	Sitemap inclusion and successful retrieval do not prove Google indexed each URL.
Configured Sanity content and code	33 service records were fetched; their unique SEO metadata was inspected. The shared page template and local schema were reviewed.	Live deployment must be rebuilt/deployed before changes affect public users.
Google search results	Not reliably retrievable as a localized Google SERP during this audit.	No competitor position or current organic rank is asserted.
Google Search Console / Business Profile	Not accessed.	Index status, queries, CTR, impressions, category setup, review count, and map rankings require owner access.

Verified technical and on-page findings

Factor	Verified status / change	Remaining check
Service routes	33 distinct CMS routes are included in sitemap; no URLs were changed and no new doorway pages were created.	Confirm submitted sitemap and URL Inspection after deployment.

SEO metadata	CMS has per-service metadata. The old shared page code ignored it. The new helper applies unique titles and descriptions, canonical URL, optional OG image and editorial noindex. Computed titles/descriptions were checked: unique across 33; title max 59 characters; description max 132 characters.	Confirm rendered HTML after deployment and inspect Google-selected canonical in Search Console.
Headings and page copy	Previous H1 was a promotional headline. It now leads with each service name plus Dwarka, Delhi; the existing headline is retained as supporting text. Existing content includes procedures, suitability, benefits and FAQs.	Clinician review required for risks, contraindications, preparation, aftercare, product claims and outcomes.
Local relevance/NAP	Canonical clinic address is normalized in site data, contact data flow, location FAQ fallback and MedicalClinic schema. Treatment pages show address, call links, map directions and contact link.	Verify the same NAP on Google Business Profile and major local citations; update CMS-managed copy if it differs.
Structured data	Site-level MedicalClinic and WebSite nodes, plus treatment BreadcrumbList, MedicalProcedure and FAQPage nodes are present in code. Doctor pages emit Person and breadcrumb nodes. Area names use Place.	Google Rich Results Test and Schema Markup Validator checks require a deployed URL; confirm JSON-LD matches rendered content.
Images	Service hero uses a CSS background. A descriptive accessible label is added when a CMS image URL exists.	Image file naming, dimensions, compression, lazy-loading and visual relevance require the actual Sanity assets and PageSpeed checks. CSS backgrounds are not optimized by next/image.
Internal links	Treatment pages link to related treatments and doctors; contact/appointment actions are present and a directions link was added.	Run a deployed crawler to identify broken or orphaned links across every CMS entry.
Mobile/Core Web Vitals	No confirmed mobile/CWV defect from this code audit. Responsive CSS exists; production metrics were not retrieved.	Test mobile layout and PageSpeed Insights/CrUX/Search Console CWV after deployment.
Fallback service data	Live CMS/sitemap has 33 treatment routes; local TypeScript detail fallback contains 27 records, including Botox, which is not in the live CMS/sitemap list.	Keep CMS configured in production or reconcile the local fallback inventory with the CMS before relying on an offline/no-Sanity build. Confirm Botox is currently offered before publishing its existing fallback route.

Near-me intent, GBP and measurement

What near-me searches need

- Service-page relevance plus visible proximity/location and convenient call/directions options.
- Consistent NAP, accurate clinic details, genuine clinician credentials and useful treatment information.
- Google Business Profile completeness and prominence; local pack/maps placement is distinct from organic blue-link rankings.
- No repeated “near me” phrase insertion. The page targets the underlying local intent naturally.

Business Profile actions (access required)

- Confirm a truthful primary category (likely Dermatologist) and only add secondary categories actually applicable and available in Google.
- List the real services using the treatment names/pages; link to the relevant service or booking page where possible.
- Verify exact name/address/phones, hours, website and appointment URL; use current clinic photos.
- Request honest reviews from real patients without incentives; respond without disclosing patient information.
- Do not publish ratings/counts unless they match the current profile and can be verified.

Search measurement plan

- In Search Console, review monthly page/query performance: clicks, impressions, CTR, average position, device, and index coverage. Compare each treatment URL and filter queries containing Dwarka, Sector 7, Ramphal Chowk, Palam, “near me”, dermatologist, skin clinic and the relevant service.
- Separate branded from non-branded searches; compare pre/post deployment periods only after allowing for normal seasonality and Google recrawl.
- Use a fixed-location geo-grid for map visibility around Sector 7, Sector 6, Sector 10, Sector 12, Palam and nearby West Delhi locations. Track Google Maps/Business Profile separately from organic website positions.
- Capture localized organic SERPs for “Dermal Fillers Near Me”, “Dermal Fillers in Dwarka”, “Best Dermal Fillers in Dwarka”, “Botox Near Me”, “Skin Clinic Near Me” and “Dermatologist Near Me” before competitor comparisons.

Priority work

1. **Deploy and verify:** publish code, inspect service URLs in Search Console, verify canonicals/indexability, submit sitemap if needed.
2. **Clinician content review:** add or approve balanced suitability, preparation, aftercare, risks and expected recovery for each relevant procedure; confirm doctor qualifications and every medical claim.
3. **GBP consistency:** verify categories, services, address, phones, hours, booking link, photos and genuine review process.
4. **Technical monitoring:** run schema validators and a full crawl; measure mobile usability and Core Web Vitals; reconcile local fallback treatment records.
5. **Local competitor baseline:** record a location-specific SERP and map geo-grid, then repeat monthly alongside Search Console query data.

Service keywords and metadata below are relevance-led targets based on the actual CMS service names, suitability details and current unique metadata. No search-volume or ranking data was available. Treat “Best” and locality variants as query hypotheses, not claims about the clinic or assurances of rank.

Complete service inventory and keyword mapping

33 existing service pages from the configured CMS/sitemap. Existing URLs are preserved. The separately flagged Botox record is a CMS coverage gap, not an active route. Each live-service row gives the unique title and description expected after deployment.

Anti-Wrinkle Therapy (Botox)

Existing local fallback/anti-ageing mention; not in live CMS sitemap

URL status: Existing code fallback uses /treatments/botox; no matching live treatment URL found.

Candidate keywords (only if confirmed offered): Botox in Dwarka, Botox in Sector 7 Dwarka, Botox near me, Best Botox in Dwarka, Botox clinic in Dwarka; frown lines, forehead lines, crow's feet, botulinum toxin consultation.

Local: Sector 7 Dwarka, Ramphal Chowk, Palam, Dwarka, New Delhi, West Delhi.

Recommended title/description: Do not publish until the clinic confirms current availability and the clinician approves the page. If confirmed, use the existing slug and unique metadata; do not create a duplicate URL.

Regenera Activa

Hair Restoration

https://dermaheal.co.in/treatments/Regenera-Activa

Primary: Regenera Activa Hair Treatment in Dwarka, Delhi; Regenera Activa Hair Treatment in Sector 7 Dwarka; Regenera Activa Hair Treatment near me; Best Regenera Activa Hair Treatment in Dwarka; Regenera Activa Hair Treatment clinic in Dwarka
